BENEFITS

Fast Response Time & High Resolution

The Turbine wheel's low moment of inertia allows a fast acceleration from standstill up to full number of revolutions within 5 to 50 ms. For that reason, dynamic measurements can be made. The resolution can amount to as much as 3,000 pulses per liter.

Wide Temperature Range

Standard turbine: -4 up to 248°F
Special models for cryogenic liquids: -76°F
Special models w/ hi-temp pickups: up to 662°F.

Low Contamination Risk

The spacing of the turbine wheel and bearing mount is wide enough to protect against particles in fluid jamming the turbine wheel. And the Twist of flow in this area has a self-cleaning effect for the bearing.
