

Flow Data Delivery – with an EDGE

Built upon a foundation of scalability, flexibility, and stability, the EDGE family of flow meter electronics provides you better access, understanding, and control of your processes. The innovative signal processing, increased accuracy from linearization, flexibility to choose the output you need (pulse, analog, or Modbus), and incredible ease of use make AW-Lake's EDGE products the smart choice to use on your Positive Displacement or Turbine flow meters.

The EDGE family currently offers three electronics to choose from:

- DIN panel mount converter that converts your basic mechanical meter into a Smart sensor
- Local mount sensor that helps control your process by acting when conditions go out of tolerance
- Battery, Loop, or DC powered display that does everything

With easy mobile or PC based apps that streamline installation, configuration, and troubleshooting, or act as a hand-held display; the EDGE family of flow transmitters will help you improve your process.
